--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

1. Claims 4 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 4, the term "said antistatic film" lacks antecedent basis.

In claim 13, the term "the site" lacks proper antecedent basis. The site is not defined in any base claim(s).

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 8, 10, 12, 13/12, 24 and 25 are rejected under 35 U.S.C. 102(b) as being anticipated by Toshiichi submitted by applicant.

Toshiichi discloses an image forming apparatus (see abstract) as claimed by applicant wherein an electroconductive member (6) is arranged on inner wall surface of the envelope electron source between an image forming member and substrate, toward the substrate side. As shown in Figure 3, the image

forming member is formed to entirely surround the electron source. The electron source has plural electron emitting devices connected through wires. The insulating member (5) arranged between the conductor terminal (7) and the site (substrate site).

Consequently, Toshiichi anticipates applicant's claims 1, 2, 8, 10, 12, 13/12, 24 and 25.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 7 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toshiichi as applied to claim 1.

Although Toshiichi does not disclose specific resistance of the conductive member as claimed by applicant, selecting an appropriate resistance of the conductive element would have been obvious to one of ordinary skill in the art for grounding electrostatic charge from the device.

6. Claims 3-6, 9, 11, 13/11, 14-22, 26, and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
